Safety, protections, compatibility and explosion proof

Isolating repeater is equipped with protection against input and output current overload.

Working areas acc. to EN 60079-10 - non-explosive, or installation in flameproof enclosure "d".

Connection to supply can be only through fuse or overcurrent circuit breaker - max. 16 A.

Unit is sheltered by fuse T80 mA (variant 230 V) and T500 mA (variant 24 V).

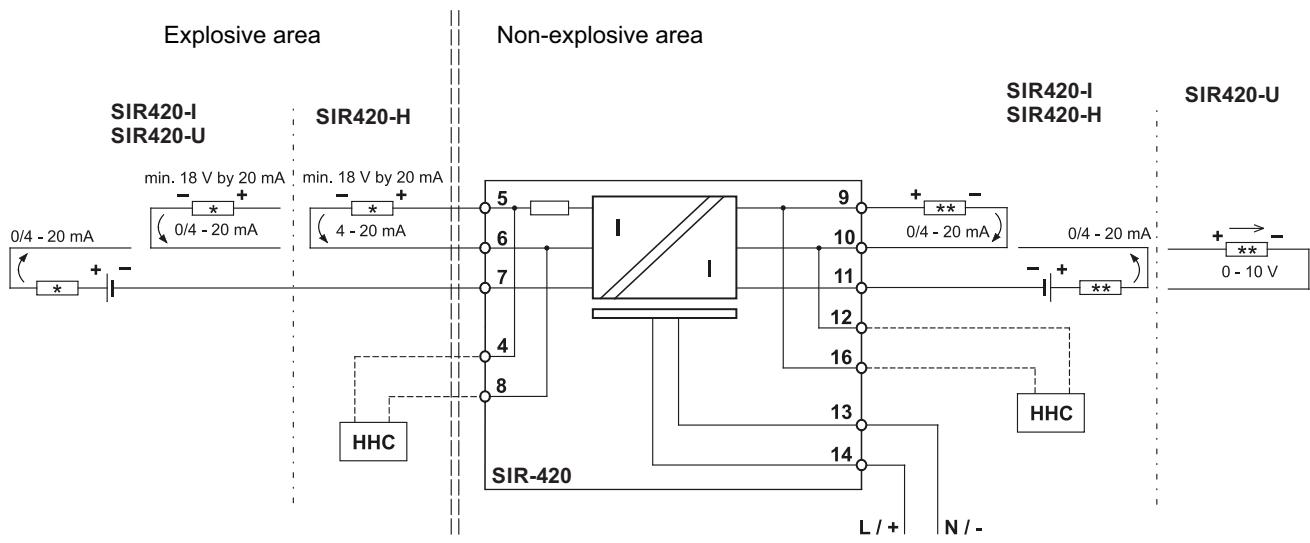

Electrical equipment of protection group II.

Notes:

HHC - Hand-held communicator (communicator HART®). Only for variant SIR 420-H.

* - Device in explosive area with output signal 0/4 ÷ 20 mA (two-wire intrinsically safe level meters, e.g. SLU, MSLU). SIR420-U only convert signal 4 ÷ 20 mA to 0 ÷ 10 V.

** - Output devices (e.g. programmable display unit PDU, analog input PLC etc.). For bi-directional transmission HART® communication signal, the loop's resistance must be min. 250 Ω. For variant with voltage output, the device resistance must be min. 500 Ω.
